Gibson Wire Mesh Belt Blasters offer the ability to utilize a blasting machine in conjunction with another machine to automate a process reducing high labor costs normally associated with batch type blasters. They come in many belt widths beginning with our 12" wide belt and are offered in larger widths. They also come with multiple blast wheels and horse powers with a level of speed and efficiency unmatched by other equipment manufactures. Gibson produces these flow through type units in many different sizes and configurations and can be customized to accommodate your blasting needs.
